

Efficiency, Profitability, and
Transparency: All in One Place

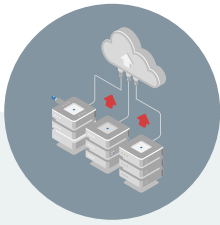

Analytix IT Infrastructure Solutions for CPAs

Analytix Managed IT Solutions

Analytix Solutions delivers flexible, reliable, and secure IT Infrastructure solutions with personalized service at affordable costs. For many CPA firms, IT can be hard to manage on top of day-to-day business. We continuously maintain your IT systems so they are always up and running and do not shut down, especially during peak periods such as tax season.

Additionally, through a combination of local support and remote teams, we provide a single point of contact, strategic guidance, and, if required, set up infrastructure in the cloud with AWS or Azure. This allows users to work from anywhere. Having users' desktop data in the cloud helps eliminate many issues related to data security and management.

Managed Cloud Services

- Cloud strategy & consulting
- Cloud migration & implementation
- Management & optimization

Remote IT Services

- Infrastructure management service
- Server management
- Desktop management & helpdesk

Managed Endpoint Security

- Threat management
- Vulnerability management
- Multi-layered protection
- Cross-platform support

Virtualization

Managed Cloud Services

Analytix managed IT services are an umbrella under which we proactively monitor periodic preventive maintenance tasks like managed server, managed workstation, managed firewall, managed network devices, managed storage, managed backup (with offsite replication of data), disaster recovery, and managed anti-virus. This includes proactive troubleshooting, setting alerts, and keeping you updated with warranty expiration of hardware.

Our managed information technology services give you a comprehensive IT solution that best fits your needs now and grows with your future requirements.

The main challenges addressed include:

- Continuous struggle with multiple non-standard approaches to managing IT performance
- Lack of visibility leading to inability to address the cause of performance & utilization downtime
- Performance failure leading to reduced enterprise productivity and improper compliance
- Reduced ROI in IT and systems management

Cloud Management & Optimization

- ✓ Risk Reports & Remediation Plan
- ✓ Disaster Recovery Test Reports
- ✓ Forecast & Trends Reporting
- ✓ Cost Savings
- ✓ Tools and Automation
- ✓ Operational Metrics

Remote IT Services

CPA firms can benefit immensely from remote IT support. The cost savings realized by not owning hardware and software and by not needing to staff a data center are considerable. You can access the latest industry processes and techniques, taking advantage of operational efficiencies. Perhaps the greatest benefit of remote IT support is your opportunity to free up resources to focus on growing your business instead of maintaining your infrastructure. Analytix offers 24x7 support availability, so you get the help you need, when you need it most.

It is possible to monitor and manage your infrastructure remotely and effectively with the remote IT services offered by Analytix.

- Planning – This includes environment evaluation, technology selection, app infra capacity planning, performance & security audits, server virtualization, server upgrade & cloud planning.
- Implementation – This includes technology & tools configuration, project management, app & configuration upgrades, cloud services configuration, infrastructure migration to cloud and pre-deployment testing.
- Management – This includes monitoring, problem resolution, root-causes, corrective actions, proactive health checks and improvement of operations, performance tuning & configuration management and disaster recovery.

Our Services

Server Management

- ✓ Application Management
- ✓ Patch Management
- ✓ Backup Administration
- ✓ Analysis and Escalation
- ✓ Trend Reporting

Desktop Management & Helpdesk

- ✓ Desktop Preventive Maintenance
- ✓ 3rd Party App Support
- ✓ Anti-virus Management
- ✓ Service Request Management
- ✓ Phone Call Support

Managed Endpoint Security

Analytix provides services for securing endpoints like workstations, servers, firewalls, and mobile devices. Endpoint security involves proactively detecting and responding to advanced security threats like malware, ransomware, phishing, and social engineering campaigns. In addition, our services combat insider threats looking to steal intellectual property or company assets. We remotely manage security of your system with the help of software. More than 43% of cyberattacks target businesses, with 94% of malware delivered by email.

- Managed endpoint security services are important for detecting and remediating threats immediately even as the team works remotely.
- Complete, integrated endpoint security solutions prevent breaches by detecting and responding rapidly to threats across workstations, servers, and network devices.
- Our services secure, discover, and respond to the sophisticated threats targeting your endpoints.

Benefits of Managed Endpoint Security Services

Reduce Security Expenses

Leverage a Team of Experts

Increase Productivity Due to Less Stress

Proactively Maintain Security Updates and Patch Management

24/7 Monitoring With Intelligent Remediation

Working With Analytix

- Cost-effectiveness ensured
- Technical tasks performed without onsite visits
- Flexible, reliable, secure solutions
- Technical expertise and cross industry experience
- Routine functions, such as software upgrades, completed during non-business hours

Engagement Model

Staff Augmentation Model

You may have an IT team and yet need additional support. Alternatively, you may opt for full-time outsourcing or part-time IT support from someone who can work in your timezone and who has a skill set that matches your requirements. Our support extends to dedicated engineers who can help with procurement or other requirements.

Time & Material Model

We assist our clients and partners by managing, maintaining, and optimizing their cloud infrastructure with AWS and Azure for short term projects as and when needed. You can stay focused on your business as we assist you in migration, architecture design, security, and operations while minimizing risk or downtime, while assuring high performance, security, compliance, and cost control.

What Our Clients Say

"We are very pleased with our relationship with Analytix Solutions and their Managed IT services team. Their timely support and ability to proactively address scalability and support issues are a great value to Sport IT and directly impacts our own customer satisfaction levels."
